Iowa, Northern Iowa

# Iowa Space Grant Consortium

A part of NASA's National Space Grant College and Fellowship Program since 1990, the ISGC continually strives to improve and inspire Iowa's future in Science, Technology, Engineering and Math.

The ISGC supports aerospace research, education and outreach activities for all Iowans with NASA internships, fellowships, and scholarships, competitions for grants within higher education affiliates (with NASA Mission Directorate alignment), as well as informal education grants with outreach affiliates.

With the help of six universities across the state, as well as a number of private industry, educational and government organizations, and science museums, ISGC is able to carry out its goals. Funding from the ISGC for grants and projects is allocated through our affiliates.

Details on the ISGC may be accessed through our website: [www.iaspacegrant.org](http://www.iaspacegrant.org).

Curriculum Development

# IOWA

NASA EPSCoR (Established Program to Stimulate Competitive Research) has awarded Iowa with a **Research Infrastructure Development Award**. With this funding, Iowa NASA EPSCoR is able to fund Iowa Faculty and Junior Faculty Researchers at the higher educational institutions with Research Building Seed Grants and Partnership Development Travel Grants to create and foster NASA connections. The goal of the EPSCoR program is to achieve NASA Mission Directorate goals while also improving the economic development of the jurisdiction. A Research Development Symposium is to be held each Spring to facilitate collaboration among Iowa researchers.

NASA EPSCoR Funding Opportunities also include:

EPSCoR Research Award - \$750,000 to be spent over 3 years

International Space Station Flight Opportunity - \$100,000 over 3 years

Suborbital Flight Opportunity - \$250,000 over 3 years

Rapid Response Research (R3) - \$100,000 for 1 year

Details on the Iowa NASA EPSCoR program may be accessed through our website: <https://ianasaepscor.engineering.iastate.edu>.
